Like all Apollo hi-fi furniture, the Aria range is designed to make your components look good and sound better. It also provides a flexible, sensible answer to your changing audio-visual needs.

At its simplest, Aria furniture comprises a single shelf 'base pack'. Then just add Aria modules as your system grows. Build up individual vertical shelving units or link units for continuous side-by-side TV and hi-fi housing. Assembly is simplicity itself and no Aria parts need ever become redundant.

The resulting solidity and strength formed by the method of assembly has positive sound deadening and de-coupling benefits. The shelving is available in either black veneer

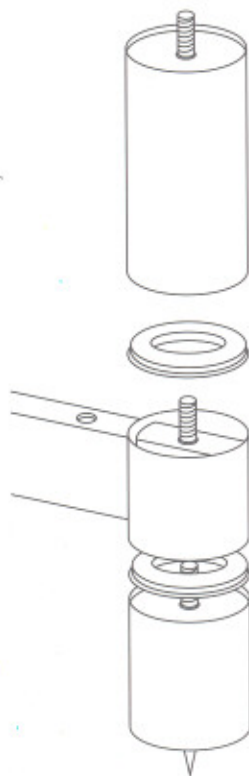

MDF, 6mm grey tinted safety glass and optional 12mm clear glass.

Adjustable spikes support and further isolate the shelves, while sound-absorbing pads are available as an alternative.

The adjustable carpet-piercing spikes provide an acoustically sound and level foundation.

And to compliment the Aria range of furniture is a selection of storage units designed to hold your CD's, laser disks and records in style.

Aria legs and supports are made from tubular steel and are now available in a range of ready-made coated finishes to suit the ambience of your room. Options include adjustable feet and castors.

Due to the limitations of the printing process, colour may differ from the printed photographs.
