

A photograph of two tall, angular wooden speakers. The central speaker is shown from the front, featuring three drivers: a small tweeter at the top, and two larger drivers (likely a midrange and a woofer) stacked vertically. To its right is another speaker, partially visible, showing a large black grille. The background is a warm, textured wood panel. The lighting is dramatic, highlighting the geometric shapes and wood grain.

AVALON

ASCENDANT

Superlative performance in a compact package, the ASCENDANT features many of the design philosophies pioneered in the Isis. Easy to drive and efficient, the ASCENDANT is a magician, throwing a huge and stable soundstage in even modest size listening rooms. The dynamic ASCENDANT combines startling bass response with concise transparency once deemed unthinkable for a transducer of this size. Transient bass impact is startling with vanishingly low 2nd and 3rd harmonic distortion properties. Combining exceptional efficiency and ease of drivability, the ASCENDANT will extract truly dynamic performance from amplifiers possessing only moderate power output levels building vast and open soundstaging vistas.

Transparency and imaging clarity have been the defining hallmarks of all Avalon Acoustics transducers for 20 years; with the powerfully concise ASCENDANT we have added yet another brilliant example of this heritage to our proud stable of products.

SPECIFICATIONS

| | |
|-----------------------------|---|
| Driver Complement : | 1 inch Proprietary Composite Neodymium Tweeter 2- 7 inch Nomex Kevlar Composite Cone Woofers |
| Sensitivity | 89dB |
| Impedence | 4 ohms nominal |
| Frequency Response | 28Hz to 25kHz |
| Recommended Amplifier Power | 50 to 200 Watts |
| Wiring Method | Two Position Binding Post |
| Dimensions | 37 inches High (94 cm) 10 inches Wide (26 cm) 13 inches Deep (33cm) |
| Weight | 75 Pounds (34 kg) each |
