

# ORIS SWING MkII

Welcome to the radical new ORIS SWING MkII loudspeaker system combining exceptionally high quality horn loaded drivers with optimal cabinet design to deliver ultimate performance!

The ORIS SWING MkII is the second release of this exclusive custom build loudspeaker system, hand crafted and optimized for sound providing coherency and speed like a full-range driver and giving lifelike dynamics and transparency from the very low's up to the highest frequencies.

As the first release already seems hard to beat, the MkII shows how time and overall experiences lead to several system enhancements as higher sensitivity, enlarged enclosure for deeper and more tight bass with more weight and improved crossover design for optimal integration.

Important improvements leaving absolutely nothing to complain about their performance unless reality is not to your liking...

The ORIS SWING MkII system deserves a very good front-end which is optimal tuned for best sound, the system itself is never the limiting factor, it will just show very accurate what you'll feed them and the very high sensitivity and friendly impedance behavior makes the ORIS SWING MkII loudspeaker system a perfect match for any type of amplifier.

Each pair of the basic ORIS SWING MkII enclosures are made from 288 parts involving 428 holes and 348

grooves making it a very complex puzzle! The resulting enclosure plays a large part in the SWING's natural tonal character without adding any disturbing "noise" to the music itself.

**Frequency response:**

24Hz - 22kHz (-3dB)

**Sensitivity:**

115dB/1Watt/1m

**Crossover frequencies:**

270Hz and 7kHz

**Nett total weight:**

105kg each

**Shipping weight:**

150kg each

**Maximum Dimensions:**

57.5" x 31" x 27" (LxBxH)

**Optimal listening distance:**

2,5m or more

Furthermore, the whole system is as standard based on the best parts such as top quality pure silver Duelund Coherence internal wiring and Duelund Coherent crossover parts throughout the system.

The inbuilt bass amplifiers with control panel give the options to fine tune the SWING MkII system to your personal preferences and listening conditions.

The system is custom build (hand crafted) on order giving the flexibility to the customer to choose their own finish for the horns and the type and finish for the veneer to apply to the enclosures.

This way the design remains exclusive, one of a kind and looking extremely good in any domestic environment.
