

Black Rhodium

High Quality Audio & Home Cinema Cables

Made In England

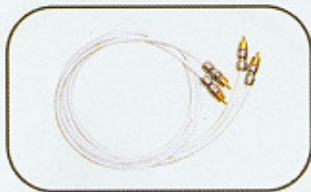

BLACK RHODIUM audio and video cable material technologies,

Stereo Audio Interconnects

Melody

Melody encompasses the high frequency softness of tinned copper wire with the natural clarity and definition of silicone rubber. You enjoy the benefits of clear, open natural sound that makes music so much more exciting than with cables normally supplied with your equipment. A wonderful starter into high quality audio.

Rhythm

If there was ever the perfect recipe for clear rhythmic bass lines in music, this cable has it. Silver plated copper conductors combined with low loss PTFE insulation cannot be beaten in this application. Fully screened for freedom from interference over long runs, and your sub woofers will sing like never before.

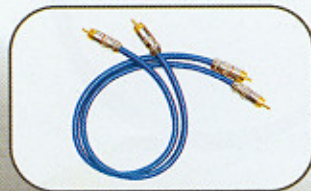

Harmony

Harmony gives you all the benefits that you have enjoyed from Melody with added gains of extended bass, superior imagery and greater clarity due to the increased number of wires.

Symphony

Separating the sound of all the different instruments in a symphony is not easy for hi-fi equipment. Symphony gives the extra clarity, definition and detail required to enjoy the full majesty of a symphony orchestra in your own home that is only possible using innovative pure nickel conductor wires. The benefits of balanced XLR connections added to the qualities of Symphony make up a wonderful musical experience.

Concerto

Reproducing the subtle nuances of a solo piano or violin when accompanied by a full orchestra increase the demands for perfection in hi-fi. Concerto uses solid core technology to extend the performance boundaries. You will experience the joys of full rich musical textures from placing Concerto in your system. A "must buy" cable for valve users.

each cable being designed as the

Digital Audio Interconnects

Rhythm

For audio, this cable really delivers rhythm. For digital audio you enjoy the clarity that you gain from silver plate technology coupled with the low loss from PTFE dielectric. The benefit is outstanding musical quality at a very affordable price.

Adagio

As Rhythm does, Adagio offers you the benefits of silver plate technology and PTFE low loss insulation, but with the advantage of 75Ω impedance for superior performance reliability and sound quality.

Rondo

All the benefits of silver plating, PTFE insulation and 75Ω impedance, coupled to an outstanding cable designed for low transmission losses at radio frequencies combine to recover exceptional sound quality from your digital music.

Symphony

Symphony balanced digital cables use the same technology that gives you outstanding musical resolution in analogue to give you superior resolution of digitally encoded music.

Scherzo

A new cable for the digital age, Scherzo combines outstanding sound quality with exceptional screening parameters against RF interference generated within digital equipment.

(this product will be available from May 2002).

BLACK RHODIUM Home Cinema and Hi-fi Interconnects give you the benefits of high quality materials and British cable manufacture to exacting standards.

d by the use of many different
est for the task it performs.

Home Cinema Interconnects

Scarlet

BLACK RHODIUM Scarlet is double coaxial silver plated cable designed to extract the highest performance on S-Video signals. You enjoy the benefits of a better picture, better focussed with more natural colours.

Magenta

Component Video is the vision equivalent of BiWiring of loudspeaker cables. In return for the cost of the extra cables, relatively small in comparison with the cost of high quality screens, you enjoy superior picture quality.

Magenta is a specialist Component Video cable offering you the benefits of advanced technology at a realistic price. You get outstanding picture quality that justifies buying high performance plasma screens and projectors.

Blue x 3 and Green x 3

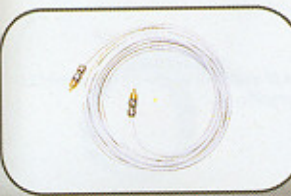

Blue x 3 is hand-crafted, comprising 3 high quality 75Ω silver plated coaxial cables bound together in a flexible sheath.

Green x 3 takes the performance of Blue x 3 to a higher quality level giving you the very best picture from your plasma or projector.

Indigo x 5

A 5 core video cable, based on the technology that created the outstanding picture quality of SCARLET. You will benefit even more from the extra picture clarity resulting from the additional cable cores.

Rhythm Sub Woofer

The ideal qualities for a sub woofer cable are a tight and very well controlled bass that allows each bass note to be heard clearly. Rhythm has the technology, silver plated copper wire and PTFE insulation, that is best suited to achieve this objective.

AERO SPACE TECHNOLOGY

The Leading Edge in Technology

The Leading Edge and Decay in Music

WHAT IS DIELECTRIC ABSORPTION?

There is no perfect insulating material. All insulating materials allow a very small amount of the electric signal to escape from the wire into the insulation. When the electrical voltage is varying with time, as with a music signal, energy will be absorbed into the insulation at a high voltage point and released back into the wire at a low voltage point. The effect of insulation becoming electrically charged and then later releasing that charge back into the wire is known as Dielectric Absorption. The effect is very audible in music as a smearing in time of the sound, similar to the effect of looking at a picture taken by a camera out of focus.

AERO SPACE TECHNOLOGY cables use Silicone Rubber insulation to give you all the benefits of low dielectric absorption.

Cable	Cross section mm ²	Conductor	Size	Diameter mm	Colours**
<i>Single Loudspeaker Cables</i>					
T50	0.5	Tinned Copper	2c 16 X 0.2mm ²	2.8 x 5.6	White
T200	2.0	Tinned Copper	2c 63 X 0.2mm ²		White
AST60	0.5	Tinned Copper	2c 16 X 0.2mm ²	5.9	White
AST75*	0.75	Tinned Copper	2c 24 X 0.2mm ²	7.5	Red, White
AST150	1.5	Tinned Copper	2c 30 x 0.25mm ²	7.5	White
AST200	2.0	Tinned Copper	2c 63 X 0.2mm ²	8.0	White, Blue
S300	3.0	Silver Plated Copper	2c 19 x 0.45mm ²	9.8	White
<i>BiWire Loudspeaker Cables</i>					
AST75x2	0.75	Tinned Copper	4c 24 X 0.2mm ²	7.8	Red
AST100x3	1.0	Tinned Copper	6c 32 X 0.2mm ²	9.8	White
AST200x2	2.0	Tinned Copper	4c 63 X 0.2mm ²	10.6	White, Blue
AST400x2	4.0	Tinned Copper	4c 56 X 0.3mm ²	11.5	White
S130x2	1.3	Silver Plated Copper	4c 19 x 0.3mm ²	8.8	White
S300x2	3.0	Silver Plated Copper	4c 19 X 0.45mm ²	12.5	White

*AST75 is not available in the UK.

**The availability of cable sheath colours may be changed without notice.

When you install an AERO SPACE TECHNOLOGY loudspeaker cable in your music system you will enjoy all the benefits of a high technology insulation material that offers the lowest possible dielectric absorption.

- Feel the emotion and the drama in music more strongly
- Enjoy greater ambience in a natural musical acoustic
- Follow the rhythms in the music more easily
- Notice the leading edges of musical notes more clearly
- Appreciate the natural decay in music lasting longer

Made In England

Black Rhodium

THE BLACK RHODIUM One of the most innovative products in a market place full of highly inventive technology, BLACK RHODIUM carries your musical signal over laboratory grade molybdenum wire that has been fully plated in Rhodium. You will enjoy a stunning musical performance of unbelievable clarity with a bass line like nothing else outside a live music performance.
