

**Setting a new Reference Standard  
CHRISTINE REFERENCE PREAMPLIFIER**

# Christine Reference Preamplifier

## Setting a new Reference standard

Finally, experience the illusion of space with detail, midrange and a solid holographic image. Hear the speed and bottom end grip with slam on the music. The Christine Reference Preamplifier from Merrill Audio is the finest preamplifier to date that delivers a superb, musically engaging presentation. Fully engaging, never fatiguing. The Christine Reference Preamplifier will make you sit up in your chair in wonder and realism.

The Christine Reference Pre-amplifier is built with the finest components and attention to every detail like never before. Hand routed PCB layout of each trace, the placement of the trace, the length of the trace, the multistage power supplies, the selection and matching of the finest components, balanced configuration, isolation of power, all hand soldered connections, Silver plated pure copper wire with Teflon sleeving are only some of the engineering that make the Christine Reference Pre-amplifier so special. Each unit is hand built and tested from the board level up to the finished unit. An external AC/DC Power supply unit ensures very quiet operations. The multistage power supply is so good, that power cords do not make a difference and the unit is impervious to noise on the AC line.

### Specifications:

Frequency Response: to 800kHz 0.1db, 1.5MHz -3db

S/N: 110db

THD: 0.003%

Volume control: -84db to +26db, 0.5dB steps  
-84db attenuation  
+26dB gain

Pre-set Gain range: +/- 12db

Maximum volume and Minimum Volume Setting Range: 0 to 115db.

Input voltage Max: +/- 10 Volts

Output Voltage Max: +/- 12 Volts

Inputs: 4 Balanced inputs

Outputs: 2 Balanced Outputs

Remote Trigger at 12 Volts, 20mA.

External Power Supply that is double fused.

1.25 inch White LED display.

*Remote Control for all functions*

*All settings save in permanent memory*
